Fuse™ Implant Abutment

integrated dental systems (ids) introduces Fuse™ Implant Abutments that allow users to place an esthetic provisional abutment immediately without fear of damaging the implant or compromising osseointegration.

Fuse abutments have a “breakdown” mechanism built in that “breaks” internally and prevents forces from being transmitted to the implant fixture.

Fuse abutments have a scalloped outline, s-line and are similar to custom abutments for exceptional esthetics. Fuse abutments are 2 piece and are available in 0, 15 and 25 degree angulations and are available for AnyRidge® and AnyOne Implant Systems.

ids was formed to provide a full suite of innovative tooth replacement products that will help achieve better outcomes for dentists and patients alike. Our products feature designs and technologies that provide shorter and more precise procedures, less recovery time, and enhance the relationships between dentists and their patients — all at more cost-effective price points. Our commitment to developing more solutions that help dentists provide more profitable and better results is the focus of everything we do. Innovation that delivers more for you and your patients.
