

The IT sustainability strategy consultation from HPE focuses on the five key levers of efficiency: data, software, equipment, energy, and resources, which describe efficiency opportunities for workloads and infrastructure spanning from the edge to the cloud. In addition, resources to assist you in your sustainable transformation journey are provided, starting with [Six steps for developing a sustainable IT strategy](#) workbook from Hewlett Packard Enterprise.

Our sustainable transformation technologists have been helping technology executives across the globe successfully develop and implement a sustainable IT strategy for over two decades. The team's knowledge comes from hands-on experience, research on efficiency best practices, collaboration with researchers and industry associations, as well as formal education in engineering, technology, and business. Many of the team have also earned graduate degrees or professional certifications.

Our technologists can also recommend HPE hardware and software solutions that align with your strategy to drive wide-ranging benefits—such as greater operational efficiencies, lower total cost of ownership, a smaller environmental footprint, and reduced costs. In addition, we can recommend experts in a variety of sustainability services who can support your initiatives along the way.

Participants

Cross-functional collaboration is key to ensuring the most valuable outputs from this consultation. HPE recommends participation from your CIO, IT operations, facility management, sustainability, procurement, and finance teams.

Typical agenda

- Environmental impact of technology from edge to cloud
