

# ▶ Complete Data Management for Microsoft® Exchange® and Office 365

## ▶ HIGHLIGHTS

Commvault® software ensures reliable and efficient protection, recovery, archiving, access and management for Microsoft Exchange and Office 365 environments:

### 1 Easily Protect and Archive Data

Protect and archive data residing in your Microsoft Exchange and Office 365 environments, across physical, virtual and cloud, using one truly unified platform.

### 2 Accelerate Migrations

Gain confidence knowing that messages, folders and entire mailboxes can be restored/recalled/accessed from previous versions and even to future versions of Exchange.

### 3 Recover Rapidly

Recover with near zero production impact by using integrated, application-aware hardware snapshot capabilities.

### 4 Enhance Efficiency and Reduce Backup Windows

Benefit from integrated deduplication and archiving to any storage tier, including disk, tape and the cloud.

### 5 Improve Productivity

Users are more productive with end user self-service access to Commvault-managed email natively through Outlook or through a web-based portal, even if offline.

### 6 Reduce Compliance Risk and Cost

Reduce risk and cost for legal and compliance demands with integrated journal and PST archiving, legal hold, comprehensive reporting and powerful indexing and search.

## BACKUP, RECOVER, MANAGE, ACCESS AND DISCOVERY EXCHANGE DATA

Enhance the management of Microsoft Exchange Server and Office 365 with Commvault software's deep integration with Microsoft. As a Microsoft award-winning technology partner, Commvault works closely with Microsoft to help you reduce both cost and risk while improving business uptime and access to information.

With flexible configurations to meet your unique SLAs, Commvault software delivers a unified, efficient solution to achieve all of your Exchange backup, recovery, archive, search and reporting needs. Built on a single, unified software platform, Commvault software replaces traditional approaches – typically a collection of fragmented, expensive third-party tools, hardware and appliances – that impact operational efficiency, are costly and leave you at risk.

## COMVAULT SOFTWARE FOR EXCHANGE GIVES YOU THE ABILITY TO:

- Meet your data protection demands with Database Availability Group integration that enables protection from active and passive database copies.
- Create nearly instantaneous hardware-based snapshot recovery points with IntelliSnap technology.
- Manage data growth and improve performance with integrated mailbox and PST archiving.
- Provide end users with seamless access to their data in Commvault directly from Outlook.
- Create on-premises copies of Office 365 data to protect, retain, search and perform eDiscovery for legal hold and compliance requirements.
- Protect and recover from any deployment architecture including virtual or physical, SAN and direct attached disk, on-premises or Office 365 and hybrid models

► **KEY CAPABILITIES AND BENEFITS**

COMPONENT	BENEFITS
Single Platform Data & Information Management Solution	Securely and efficiently protect, manage and access information in a single virtual repository and through a single console. Commvault software delivers faster time to value because it is a truly unified data management platform that reduces complexity, improves access to data and helps meet your recovery objectives.
Rapid, Flexible Backup and Recovery Options	Improve Exchange availability and recover full servers, databases and granular items such as: messages, folders, contacts, calendar items and files with near-zero production impact. Directly recover from any tier to any target system. Commvault IntelliSnap® technology enables you to create and manage multiple point-in-time, application-aware copies from storage array snapshots. Commvault software also provides searchable recoveries across multiple snapshots / backups at a granular object level. Browse, search and restore across various versions of Exchange.
Long-Term Retention, PST Archiving and Tiered Storage	Optimize your overall data management approach according to performance, solution cost and data value. Reclaim valuable primary storage space by archiving stale and infrequently accessed data with automated data movement according to administrator-defined policies to cost-effective secondary storage including disk, tape or the cloud for a faster, trimmer, better performing Exchange server. Help meet compliance needs by archiving .PST file data into the ContentStore and making it searchable and still directly accessible by users.
Indexing, eDiscovery and Legal Hold	Empower legal and compliance teams and reduce cost and risk with the capability to perform full text search and eDiscovery across backup and archive data sets through a role-based access web portal for straight forward compliance and legal hold activities.
Self-Service Access	Improve productivity and reduce the IT burden by delivering seamless self-service end user access to Commvault-managed email within the Commvault ContentStore via a web-based portal and ContentStore Mail, a plug-in that enables end users to search, view and recover emails using a native Outlook search experience.
Global Deduplication	Leverage source and/or target-based, global deduplication to eliminate up to 90% of redundant data, significantly reducing overall storage and network usage for backup and archive data. Scale from small, individual nodes up to large, multi-node databases with embedded, next-generation, grid-based architecture deduplication.
Built-In Security	Ensure data security with built-in encryption, including FIPS 140.2 certification, alerting and Active Directory integration.
Comprehensive Reporting	Analyze, profile and understand your Exchange framework for continual improvement and better policy management so you can focus efforts on high priority activities. Commvault reporting allows you to quickly identify the status of your data protection environment, where hot spots may be developing, or where resources are being consumed.
Consulting, Professional Training and Support Services	Achieve the fastest time-to-value for data management investments through a full suite of Commvault Services. Our teams deliver industry expertise to maximize the value of your data management strategy and provide proven design, deployment and installation of your Commvault software environment. Services can also help improve the productivity and self-sufficiency of your technical staff, and deliver industry-leading product support and monitoring for your Commvault solution.
