

# In Healthcare, response time is critical, *enter Ensource...*

As healthcare costs continue to rise, hospitals around the country are seeking new ways to reduce expenses while delivering improved patient care. Unlike other businesses, the healthcare industry requires 100% access to information, whether that information is in the form of voice, data, video, text or images.

Ensource's focus is to assist healthcare organizations with their many communication networking challenges such as:

- Security and identity management for wireless and wired networks.
- Supporting new applications for doctors and nurses to improve patient care.
- Staff development – not only installing the hardware but training the staff to utilize it appropriately.
- Supporting user mobility throughout a campus environment without breaching security.
- Easily managing the network across the entire hospital campus with a small support staff.
- Following the increased healthcare regulations of the federal government.
- Supporting mission critical availability and reliability at all times – no down time.

Management of high technology assets begins with an understanding of a healthcare organization's goals and the equipment it needs to meet them.

*Internet telephony, SIP or voice over internet protocol, allows computers and phones to link so that busy workers can bring their personal phone extensions anywhere.*

*For years Ensource has been providing healthcare institutions with new product solutions, wireless solutions, spare parts, customized maintenance services, dedicated on-site or on-call technical support, consulting, and project management.*

Ensource places an emphasis on the specific needs of telecommunications in healthcare institutions, our largest customer sector.

With the continuum of care and providers' business problems in mind, many applications and solutions are available to fit the medical industry today, including disaster recovery, mobility solutions, remote access and S.I.P. as well as VoIP. At Ensource we know healthcare, let us help!
