

LANIER

Print & Copy Control

SOLUTION

Fully integrated document output tracking

Manage user authentication, generate detailed cost tracking and improve document security without adding external hardware

Smart, Efficient Cost Management

LANIER® Print & Copy Control (PCC) is a Java-based embedded software solution that helps administrators in any size organization control user access to MFPs*, tracks device usage and costs in detail, gives users greater mobility and reduces paper waste. All of these capabilities make it an ideal addition to Equitrac Office® or Equitrac Express®.

Flexible, Convenient Output

Lanier PCC maximizes convenience and security with innovative printing and scanning capabilities.

- Print from any MFP on the network and avoid busy or unavailable devices with Follow-You Printing®. This capability also locates documents on any print server or workstation automatically, without a manual search.
- Enable quick, easy scanning with Scan-to-Me™. This built-in feature lets users scan originals directly to their own e-mail addresses.
- Schedule automatic deletion of jobs that sit on the server after a preset time.
- Strengthen security by ensuring documents are released to print by the user and confidential documents are not sitting accessible in output trays.
- Access PCC functionality right from the MFP touch-screen, including Single Sign-On to GlobalScan™.

Detailed Cost Tracking

Lanier PCC tracks copies, faxes, scans and any documents printed from servers. It delivers all of this valuable data to your Equitrac system.

- Track color and black & white output using separate pricing structures.
- Create quotas and account balances for users and projects.
- Differentiate between billable and non-billable documents with billing codes.
- Capture transactions via offline operation in case the network connection is lost.

Secure Authentication

Prevent unauthorized MFP access with secure authentication.

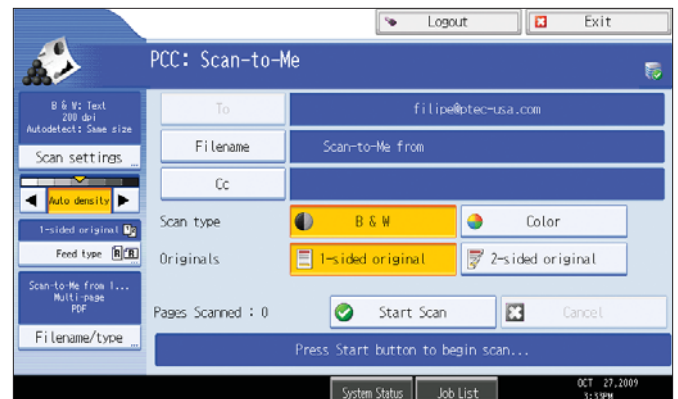

- Authenticate users with access control card readers from HID, HID iCLASS, Mifare, Legic, Indala or Hitag, as well as magstripe cards.
- Track document output via secure PIN codes and/or network login passwords.

Easy Installation and Maintenance

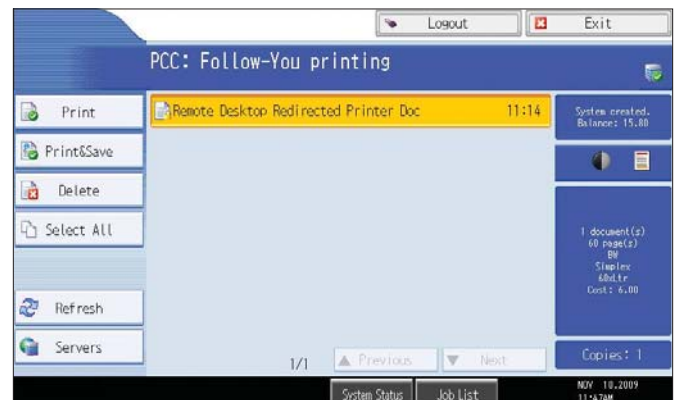

Centralized control allows easy configuration.

- Install and start tracking usage quickly. The PCC embedded design on select Lanier devices* simplifies implementation.
- Configure devices centrally instead of visiting MFPs to make individual updates.
- Eliminate the need for extra cables, MFP disassembly or terminal configurations.

*Consult your authorized Lanier reseller for a list of supported models.

Scan-to-Me enables users to automatically send a copy of any scanned document to their own e-mail address.

The Follow-You interface displays document properties and costs, and makes it easy to request multiple copies.

Simplify use and strengthen security with an optional card reader.
