NSi™ Mobile

Move beyond paper

You've escaped the desk. Mobile devices allow you to work more productively in more places, giving you unprecedented freedom in the workplace. So, why are you still letting paper tie you down? NSi™ Mobile from LANIER™ is an easy-to-use app that enables remote workers to send documents, photographs and other electronic files to accounting, healthcare, ERP and other business applications. Access business forms directly from your mobile device and complete office tasks wherever you are. When you're in the office, you can even use the app to print sensitive documents to the nearest network printer for secure, convenient "on-demand" printing.

What's the point of a mobile productivity app if it limits what you can do? Unlike many other apps, NSi™ Mobile is a total solution, offering a unique combination of features that leverages the capabilities of NSi™ AutoStore® and NSi™ Output Manager™. Use it to capture, share, print and perform key document management tasks remotely, right from your mobile device.

Take your workflows with you

Capture efficiency, remotely

There's no need to race to the computer when you have NSi Mobile in your hand. Take a photo, attach an email, download a Cloud-based file or grab any other application from your mobile device and send it securely to your organization's business applications. You can also capture PDFs and Microsoft Word, PowerPoint, and Excel documents easily, from just about anywhere.

Manage electronic forms

Paper documents get in the way and slow you down. Plus, they're easy to lose. So stop relying on them. With NSi Mobile new patient admittance, claims processing and other forms-based applications can be securely delivered to your mobile device. Data is validated directly within the form itself. It enables you to complete almost any business process more quickly, accurately and conveniently.

Use barcodes to simplify tasks

Let your mobile device do the work for you. Use it to read barcodes and populate e-form fields immediately, with accurate data pulled right from the database. NSi Mobile supports most commonly used barcode types, so mobile workers can complete electronic forms for almost any application with ease.
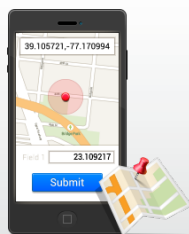

Sign here for validation

You need your signature on an important document, but you're away from the office. And, you don't have time to wait for the paper form. That's when you use NSi Mobile to sign directly on a mobile device screen. This convenient, easy-to-use tool lets you give consent, validate information and approve specific tasks even when you're far away.

Target more accountability

Add geo-location information to mobile documents and photographs, so you can track remote workers and projects. You can perform an audit of your entire mobile workforce just by reviewing location history. Simplify it even more by pointing to locations on a map for specific addresses and other details.

Run on iOS and Android

Give your workforce the freedom to choose their preferred mobile device, without compromising any of the most powerful NSi Mobile capabilities. The app is compatible with both iOS and Android operating systems and uses intuitive mobile data-capture and print applications that are built on NSi AutoStore and NSi Output Manager platforms.

Protect every file

With freedom comes responsibility. That's why we built NSi Mobile with "MyFiles", a convenient feature that connects workers to their networked Home Directory. As a result, you can share information securely with any content management system without needing third-party services or Cloud storage support.

Release print jobs securely

You want to print a document, but you don't want anybody else to see it. Initiate printing from anywhere using your mobile device. The document remains in the print queue until you release it to a specified network printer or MFP by reading the printer's barcode with your mobile device.
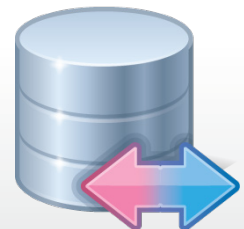

Microsoft SharePoint®

Like thousands of other companies, you use Microsoft SharePoint to collaborate and store information. NSi Mobile lets you access Microsoft SharePoint via your mobile device. Browse, view, attach and print Microsoft SharePoint documents where you are directly from your phone or tablet.

Bi-directional database connectivity

You're on the road and you need access to critical information about a client you're about to meet. Look up customer, patient, product and other information and display it on your mobile device. Using simple search fields, users can return values stored in backend databases and use them for indexing data in real-time. This saves time and minimizes data entry errors.

NSi Mobile is a key application in Notable Solutions' award-winning AutoStore® software platform. Used by more than 13,000 organizations worldwide, AutoStore simplifies the capture and secure delivery of paper and electronic documents into business applications.

NOTE: The free NSi Mobile app requires NSi™ AutoStore® or NSi™ Output Manager™ platform for all operations. Please consult with your company's IT organization before downloading and running this app. NSi Mobile will not operate without the necessary back-end system(s). To try the NSi Mobile app, you can download it now and connect to our demonstration system. Please visit www.nsimobile.com/demo for further instructions.
