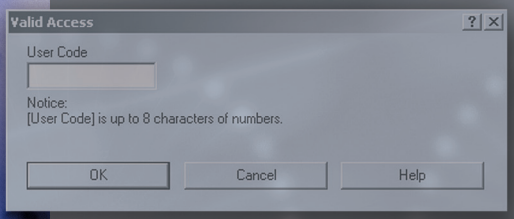
LANIER

SOLUTION

Smart Accounting



Track document output costs with ease

This affordable software solution gives organizations a simple way to track print, copy, scan, and fax activity, create detailed reports, and maintain tight control of costs

LANIER

SOLUTION

Smart Accounting

Essential, economical tools for precise cost tracking

In small and medium-sized businesses, controlling costs is critical to maintaining profitability. Document-related expenses pose an especially difficult challenge, because they are hidden and difficult to manage. Yet accounting software designed for corporate environments is too complex and too expensive. Smart Accounting from Lanier offers a simpler, more affordable solution.

This economical application enables businesses to perform essential tracking, reporting, and billing tasks quickly and easily — as well as measure document costs accurately, compile data in detailed reports, and perform accurate chargebacks.

Easy-to-use, intuitive software

Smart Accounting works with any Lanier multifunctional product or Lanier printer configured for output tracking. Pop-up drivers are available to ensure accurate tracking with no special procedures to learn.

- Employees choose options as they normally would in the print driver window. When they click "Print," they are prompted to enter their user code, and the document is released for output. Users follow a similar process to produce digital copies, scan images, or send faxes.
- Job details (such as paper size and page count) are captured and assigned to individual user codes, along with specific costs.
- To control costs even further, administrators can establish separate page prices for black & white and color output, or for letter- or legal-size paper.
- Track activity by teams or department by assigning in-house user codes for multiple-user or office-wide document management tasks.

Precise control without complex IT support

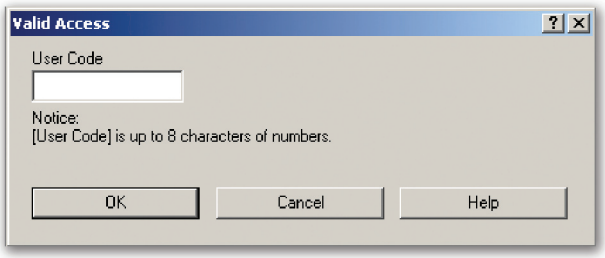
- Unlike other tracking software, Smart Accounting software can accurately differentiate between black & white and color pages within the same job, so administrators can expect accurate results from every report.
- Smart Accounting is simple to install, support, and maintain. It requires no third-party IT support, and the software does not need to be installed on employee computers (desktop or laptop) or network servers.
- Device-centric configuration makes Smart Accounting virtually impossible for users to circumvent, and it cannot be de-installed from a user's computer.

Convenient tracking, reporting, and billing

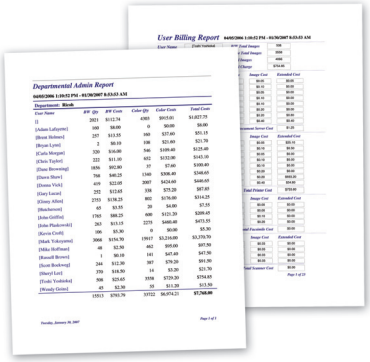
- Smart Accounting makes it easy to produce a detailed monthly report that tabulates all document output activity and related costs.
- With a precise picture of print, copy, scan, or fax transactions, administrators can measure and evaluate activities (by end-user or by group), as well as perform accurate chargebacks.
- Detailed reports eliminate disputes over document output costs.

Improve productivity

- Affordable tracking software enables smaller offices to acquire color and black & white output devices, knowing that costs can be tightly controlled or recaptured. In other words, it enables businesses to provide a wider range of in-house capabilities, eliminating the need for users to rely on expensive outsourcing.



Employees just enter their user code, then print or copy high-quality documents.



Detailed chargeback reports eliminate disputes over document output costs.

SPECIFICATIONS

INSTALLATION SYSTEM REQUIREMENTS

CPU	Pentium-based processor recommended
Disk Space	30 MB available
RAM	64 MB minimum
Operating System	Windows XP, Windows 2000, Windows 2003
