

HP Project and Portfolio Management Center

Deliver consistent business outcomes.

HP Project and Portfolio Management Center standardizes, manages and captures the execution of project and operational activities. It provides critical information in real time to help you make the right decisions at the right time.

BTO: Optimize the business outcome of IT

HP Project and Portfolio Management Center is a key component of the HP Business Technology Optimization (BTO) strategy. BTO helps you make sure that every dollar invested in IT, every resource allocated, and every application in development or production meets your business goals.

Unlike software offerings and methodologies that focus only on internal IT processes, HP BTO optimizes the strategic functions between technology and business. Our lifecycle approach enables your organization to align IT with business priorities and to deliver increased value from end to end.

Can you meet your management challenges?

Today's Project Management Organization (PMO) struggles with time, cost and resource management challenges—particularly at the aggregate level. Given these daily challenges, it's difficult for IT executives see which projects and operational activities they should be working on per how much is left in their budget, resource capacity levels and alignment with business needs.

HP Project and Portfolio Management Center

HP Project and Portfolio Management Center software helps you overcome these challenges. It provides your PMO with visibility into strategic and operational demand as well as in-flight projects and programs.

HP Project and Portfolio Management Center:

- Offers top-down planning capabilities that are supported with bottom-up detailed project plans
- Helps your IT organization quickly adapt to unforeseen changes and still maintain alignment with business objectives
- Enables execution of work in a manner that delivers business results
- Enhances visibility and enable controls to maintain compliance

HP Project and Portfolio Management Center components

HP Portfolio Management software enables you to govern your portfolio of IT projects, applications and opportunities in real time with effective collaborative processes. It gives you the information and process to make effective portfolio decisions—from proposal initiation, justification and review to project initiation, execution, deployment and benefits realization. And with the optional Portfolio Optimization feature, HP Portfolio Management automatically determines the best mix of proposed projects, projects and assets based on user-defined criteria.

HP Project and Portfolio Management Center

HP Project and Portfolio Management Center helps you optimize key business-to-IT processes.

Foundation

HP Program Management software enables you to collaboratively manage your programs from concept to completion. It automates processes for managing scope, risk, quality, issues and schedules. With HP Program Management, you no longer need multiple point tools and paper manuals to manage program initiation, approval, scope changes, risk, issue resolution, resources or status.

HP Project Management software helps you meet the challenges of managing projects in large, geographically dispersed enterprise environments. It integrates project management and process controls to reduce the number of project/schedule overruns, thereby reducing project risks and costs.

HP Financial Management software provides real-time visibility into all financial attributes related to programs, projects and overall IT demand—without costly integrations to multiple data sources. For global organizations, multi-currency is supported within the application. HP Financial Management supports comprehensive earned value analysis and SOP 98-1 capitalization.

HP Resource Management software provides comprehensive resource analysis, which includes both strategic and operational activities at any stage in the work lifecycle. This holistic approach enables a complete understanding of where resources are currently committed and allocated. In turn, your managers can quickly respond to changes with a clear understanding of the effects on resource capacity and work prioritization.

HP Time Management software helps you focus on value-added activities by streamlining time collection and improving accuracy across the wide range of work performed by IT. This provides the capabilities your IT organization needs to overcome the challenges of time collection and to focus on improving productivity and execution.

HP Demand Management software captures all requests on IT so you'll know what the organization is asking for and have the information to focus your valuable IT resources on top business priorities. Stakeholders have a comprehensive picture of past, present and future demand so requests can be prioritized, assigned, viewed and "sliced-and-diced" across multiple dimensions to identify trends.

HP Project and Portfolio Management Dashboard provides role-based, exception-oriented visibility into IT trends, status and deliverables to help you make and execute real-time decisions. It supports information sharing with other applications or corporate portals via enterprise industry standards JSR 168 and WSRP.

HP Project and Portfolio Management Foundation is our unique platform that runs the application. It includes our advanced workflow engine and configuration capabilities. Additionally, Project and Portfolio Management Foundation provides enterprise-class data security features.

Why HP?

HP is uniquely positioned to deliver your project and portfolio management solutions. We offer:

Visibility into all demand—HP Project and Portfolio Management Center provides real-time visibility into strategic and operational demand, including in-flight projects, proposals under review, and all non-project work. You can optimize your IT portfolio by rapidly identifying the projects that will deliver the highest ROI and assigning the right resources to support those projects.

Lifecycle approach—HP Project and Portfolio Management Center delivers a single platform for end-to-end lifecycle management of proposals, projects, and assets. This provides IT with a consistent framework for evaluating, managing, executing and retiring projects, as well as a way to leverage best-practices from active or retired projects.

Rapid value—HP helps you achieve a rapid return on your HP Project and Portfolio Management Center investment through packaged solution offerings delivered on-site or through a managed services deployment that is hosted over the Internet. Both approaches offer a service delivery model that will help you identify the optimal starting point to achieve a rapid successful adoption that delivers measurable results.
