Peter Pepper Products is your one stop source for a multitude of well designed and well crafted ancillary products ranging from clocks, magazine racks and coat trees, to training tables, communication boards, waste receptacles and showcases. Whatever your need may be, Peter Pepper Products has not only the selection but innovative solutions since 1952. We pride ourselves in our concern with conservation of our natural resources, reducing waste through recycling and protecting our environment.

Our environmental program is ongoing and continues to expand but is not limited to the following: The use of bio-degradable degreasers, recycling and distilling of all paint department waste, elimination of tons of material from the normal landfill waste stream through our in-house efforts in shredding of wastepaper, which is re-used as product packaging materials and full time recycling programs for glass, aluminum, steel, corrugated and wood scrap.

Ongoing product development concentrates resources towards the increased use of components that are classified as any one of the following: contain recycled content, waste-reducing products, new recycled products or recycled materials made from post consumer waste.

Some of the major materials and components include but are not limited to:

- 100% post-consumer recycled materials as found in MDF and particleboard substrates used as various components in Magazine and Literature racks, wood clocks, and various Visual Communications Collection components.
- 100% post-consumer recycled materials contained in insulation board as used in the fabric and cork covered bulletin and tack boards.
- 25% post-consumer recycled glass panels and shelves used on many PepperMint / MiniMint showcases and Visual Communication Collection boards.
- 30% post-consumer recycled materials contained in the numerous aluminum extrusions which is the main structure used in all PepperMint / MiniMint showcases and as components in our Visual Communication board Collection.
- 30% post-consumer recycled materials in our fabrics covered Tack boards.
- 50% post-consumer recycled materials contained in the glass fibers used in all of our Fiberglass Ash & Trash, Waste and Recycling Containers, Benches, Tables, Furniture, and Planters.
- 30%-100% post-consumer waste is used in our packaging materials including corrugated packing boxes containing a minimum of 30% recycled content, wooden crates, Chip board, and Shredded paper containing 90% - 100% recycled content.

Peter Pepper Products will continue to produce products with long lifecycles that can be refurbished to further extend their lifetime and reused or recycled.
