

VPOC - SaaS + Mobile App Platform

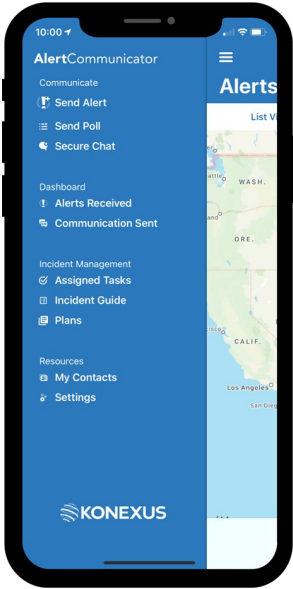

Typical **BC/DR** plans are designed for unpredictable, short in duration, limited in scope emergencies focused on specific geographic areas, facilities, or systems. **Pandemic Management** is designed for predictable, global or widespread situations that can come in waves of 2 to 3 months, require sustainable long-term plans with an understanding that no geographic areas, facilities, systems or individuals are safe.

Establishing a Virtual Pandemic Operations Center enables you to activate a standalone environment that leverages a (BIA) Business Impact Analysis metrics in an automated Resiliency program fed by real time data from Shelter in Place (SiP) remote employees along side your Return to Work (RtW) strategies. This enables you to plan, approve and execute your information security and compliance policies for vital cloud and mobile infrastructure to maintain continuity of business operations. By having real time insights into key personal, vendor and process point of failure, you can identify and communicate business continuity plans to SiP employees and manage execution of your Return to Work or Situational Awareness Normalization (SAN) strategies. Most importantly, this allows your to create, approve and execute pandemic management plans aligned to recommendations from regulatory authorities in a manner that allows for easy reporting.
