Today, it's more important than ever to invest in technology that meets the demands of your business, without changing the way you do business. At Iwatsu we listen carefully to the customers we serve, then we design our solutions to deliver the performance, features and uncompromising quality they demand.

Omega-Phone telephones are customizable to fit the unique needs of small and medium-sized businesses. They optimize the way in which calls are placed, answered, and controlled. The Omega-Phone IX-12KT series of digital telephones has eight fully programmable feature keys with red LEDs, four fixed-feature keys, and 12 multipurpose keys with red and green LEDs that are fully programmable for feature and line status indication. If 24 keys aren't enough, simply add a programmable key expansion module for an additional 12 multipurpose keys. These telephones are available with a standard speaker phone and with or without a liquid crystal display (LCD).

One example of the benefits Iwatsu's Omega-Phones offer is the IX-12KTD-2 Digital Display Key Telephone. The Omega-Phone IX-12KTD-2 provides the versatility you need today, with long-term viability in mind. Whether you consider the oversized two-line LCD, a clearly-labeled multipurpose key with red and green LEDs, or the incoming call indicator lamp, it's never been this easy to create the ideal telephone for your business.

You may select one of eight tones and three volume settings for personalized ringing.

The Omega-Phone IX-12KT series is equipped with a standard speakerphone that provides hands-free operation on both internal and external calls.

The Backspace Dialing feature eliminates the need to redial the entire telephone number when a dialing mistake is made.

N S

Regardless of lighting or glare, four angle positions and oversized characters make the Omega-Phone liquid crystal display easy to read.

The oversized dual-function indicator lamp allows you to monitor the status of your Omega-Phone from a distance. This is accomplished via a dual-color LED which flashes red for incoming calls and green for a programmable function such as message waiting.

The Busy Bypass Text Messaging feature allows you to send a text message to the display of an ADIX telephone. There are up to 90 system and 10 personal text messages to choose from.

Red and green LEDs on each multipurpose key provide feature and line status indication. Two lamps enhance the functionality of these buttons.

Eliminate the need to change the entire telephone. Simply snap in the IX-12ELK and instantly double the number of multi-purpose keys on your Omega-Phone.

The Omega-Phone IX-12KTD-2 is available in your choice of ash, gray, or black.

The handset and speaker volumes are individually controlled by the same set of buttons.

The recessed hold key decreases the likelihood of accidentally placing a call on hold.
