

▶ Unified Data Management[®] for Microsoft SharePoint[®] Systems

▶ HIGHLIGHTS

Commvault[®] software ensures reliable protection, rapid recovery, easy access and efficient management for Microsoft SharePoint, enabling the following:

1 Unified Protection and Archive

Easily protect and archive all data residing in SharePoint systems using one truly unified software platform and process.

2 Optimized SQL

Store SharePoint content on disk rather than in the database for a better performing SQL Server environment.

3 Rapid Content Recovery

Automate the declaration of business records and subsequent promotion to SharePoint for easy knowledge sharing, collaboration and content recovery.

4 Reduced Storage Footprints

Prevent multiple versions of the same document with granular management of SharePoint libraries.

5 Enhanced Data Management Efficiency

By leveraging integrated block-level deduplication to any storage tier, including disk, tape and cloud, Commvault enhances backup, archive, BLOB storage and server efficiency.

▶ Commvault software delivers rapid recovery of granular items for increased application uptime and automates archiving to control your SharePoint growth.

COMPLETE PROTECTION, MANAGEMENT AND ACCESS FOR SHAREPOINT DATA

Enhance the management of Microsoft SharePoint and extend its capabilities with Commvault software for Microsoft SharePoint Systems. As a Microsoft award-winning technology partner, Commvault works closely with Microsoft to ensure that its single-platform solution integrates seamlessly with SharePoint to help you reduce both the cost and risk of business critical data. Commvault software delivers rapid recovery of granular items for increased uptime and automates archiving to control SharePoint growth.

With flexible configurations to meet your unique SLAs, Commvault software delivers a unified, efficient solution to achieve all of your SharePoint backup, recovery and archive needs. Built on a single, unified software platform, Commvault software replaces traditional approaches – typically a collection of fragmented, expensive third-party tools, hardware and appliances – that impact operational efficiency, are costly and leave you at risk.

COMMVULT SOFTWARE FOR MICROSOFT SHAREPOINT SYSTEMS ENABLES YOU TO:

- Simplify data protection for SharePoint by managing coordinated farm, database, BLOB storage and granular data backup and recovery operations from a single software agent.
- Save time and administration-related costs with rapid granular recovery of individual SharePoint farms, documents, versions, templates, forms, views, lists, libraries and sites.
- Eliminate backup and recovery windows and enhance service levels such as RPO and RTO with automated, application-aware hardware snapshots of content databases using IntelliSnap® technology.
- Optimize SharePoint operational efficiency and manage content database growth by leveraging built-in control for BLOB storage and archiving.
- Reduce storage costs while maintaining transparent access to archive data for end users by seamlessly archiving SharePoint data to the ContentStore, a hardware-agnostic, virtual data repository for Commvault software that can span heterogeneous disk, tape and cloud storage systems.
- Ensure data security with built-in encryption, alerting and reporting.
- Securely delegate operations to users and groups through role-based access features and Active Directory integration.
- Meet your demands for changing service delivery models by protecting, managing and accessing SharePoint deployments that are on-premises, hybrid or in the cloud, including built-in connectors for Microsoft Azure and others.
- Provide secure eDiscovery and end user self-service search and access to SharePoint data stored in the Commvault ContentStore.

Comprehensive Archiving for Microsoft®SharePoint® Systems¹

This datasheet showcases how Commvault® software delivers comprehensive archive, retention and eDiscovery for Microsoft SharePoint.

► **KEY CAPABILITIES AND BENEFITS**

COMPONENT	BENEFITS
SINGLE PLATFORM DATA & INFORMATION MANAGEMENT SOLUTION	Ensure that important features like Backup, Recovery, Replication, Archiving, Search and Reporting work seamlessly together with encryption and deduplication through a single software code base to reduce cost, improve reliability and increase operational efficiency.
BLOB INTEGRATION, MANAGEMENT AND PROTECTION	Reduce operational costs, including storage, server, data protection and associated support expenses. BLOB storage technology helps deliver operational and resource efficiency while maintaining transparent access to archived data. Commvault software protects the BLOB data seamlessly as part of the backup process, including by storage array snapshot with IntelliSnap technology, eliminating the pain of additional point products to buy and manage.
RAPID RECOVERY	Recover and access data quickly to maintain uptime, wherever it resides, including farms, sites, and even versions of individual documents. Direct recovery from any tier to any target system, including from a hardware snapshot for the content database. IntelliSnap® technology enables snapshot management and provides searchable recoveries for SQL and BLOB storage across multiple snapshots / backups at a granular object level.
TIERED STORAGE	Optimize your overall data management approach according to performance, solution cost and data value. Reclaim valuable space with an automated SharePoint archive based on age, size and usage pattern. Archive data can be stored on cost-effective secondary storage. No matter how you tier your storage, whether it is disk, tape or cloud, you can be assured of automated, policy-based movement.
COMPREHENSIVE REPORTING	Commvault provides unprecedented visibility and ease of management so you can focus efforts on high priority activities. Graphic dashboards update staff daily on capacity usage, threshold warnings and trending. Commvault software reporting allows you to quickly identify the status of your data protection environment, where hot spots may be developing, or where resources are being consumed.
GLOBAL DEDUPLICATION	Leverage source and/or target-based, global deduplication to eliminate up to 90% of redundant data, significantly reducing overall storage and network usage for backup and archive data. Scale from small, individual nodes up to large, multi-node databases with embedded, next-generation, grid-based architecture deduplication.
CONSULTING, PROFESSIONAL TRAINING AND SUPPORT SERVICES	Achieve the fastest time-to-value for data management investments through a full suite of Commvault Services. Our teams deliver industry expertise to maximize the value of your data management strategy and provide proven design, deployment and installation of your Commvault software environment. Services can also help improve the productivity and self-sufficiency of your technical staff, and deliver industry-leading product support and monitoring for your Commvault solution.
